1. Objective

What was the task about?

In this task, I learned how HTTP and HTTPS work, how browsers communicate with web servers, and how URLs, HTTP methods, status codes, headers, and cookies are used in web applications. I also practised making HTTP requests using the TryHackMe emulator.

2. Concept / Understanding

What did you learn?

I learned how HTTP and HTTPS work and how a browser sends requests to a web server and receives responses. I understood different HTTP methods, status codes, headers, URLs, and cookies. I also learned how to make GET, POST, PUT, and DELETE requests and how they are used to interact with web applications.

3. Practical Work

What did you perform? Write only what you actually did.

1. I opened the TryHackMe HTTP in Detail room and studied the basics of HTTP and HTTPS.
2. I learned how URLs are structured and how they help browsers access web resources.
3. I studied HTTP requests and responses and understood how browsers communicate with web servers.
4. I examined an example of an HTTP request and identified its method, path, version, and headers.
5. I studied HTTP methods such as GET, POST, PUT, and DELETE.
6. I learned about HTTP status codes, including 200, 201, 301, 404, and 500.
7. I studied common request headers such as Host, User-Agent, Content-Length, and Cookie.
8. I learned about response headers such as Set-Cookie, Cache-Control, Content-Type, and Content-Encoding.
9. I understood how cookies store information in the browser and help websites maintain user sessions.
10. I learned how to view cookies and HTTP requests using browser developer tools.
11. I opened the HTTP request emulator provided in the TryHackMe room.
12. I practised sending a GET request to the /room page.
13. I practised sending a GET request to the /blog page with the id=1 parameter.
14. I practised DELETE and PUT requests to understand how web resources can be removed and updated.
15. I practised a POST request to the /login endpoint using the provided username and password parameters.

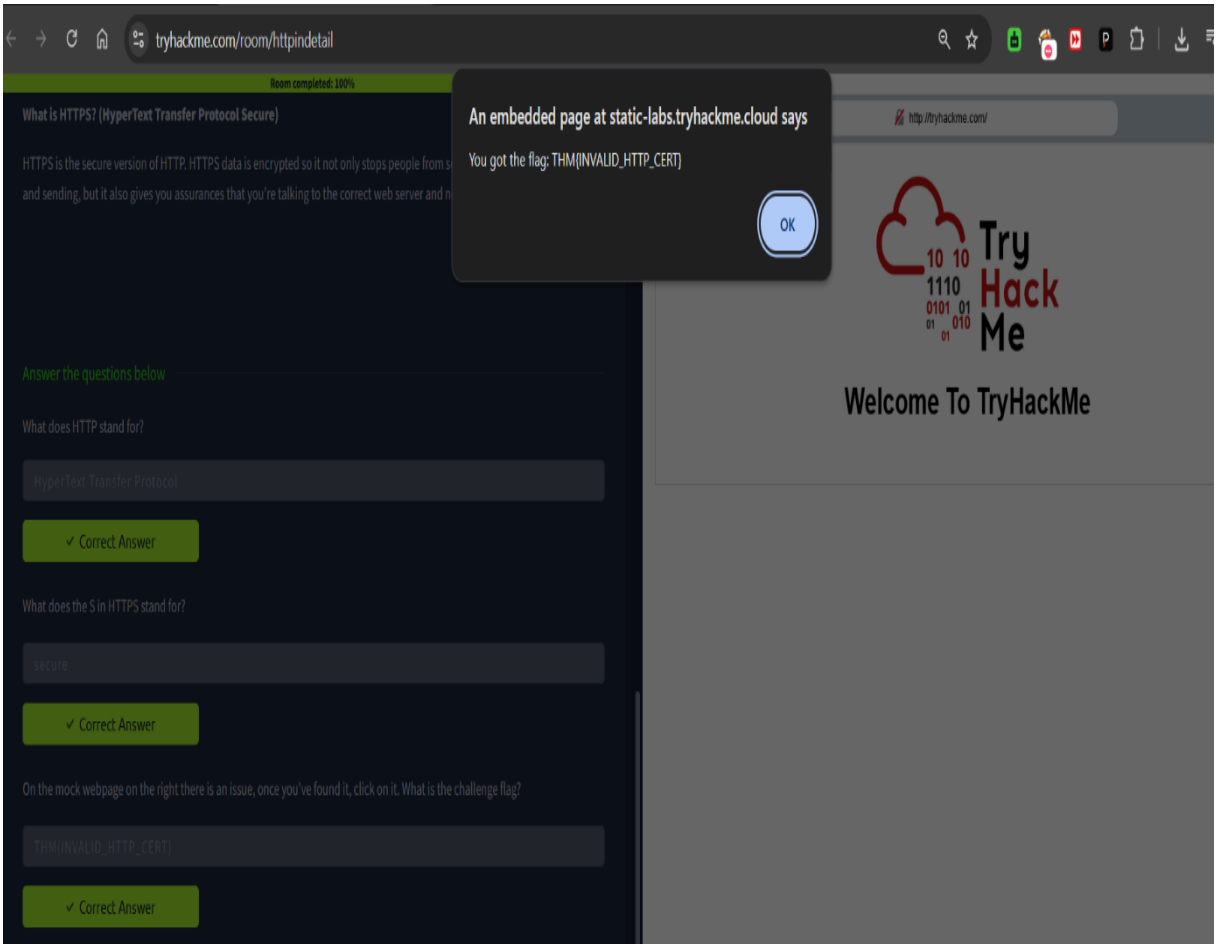

4. Tools Used

Tools used during the task.

- *TryHackMe HTTP in Detail room*
- *Web browser*
- *TryHackMe HTTP request emulator*
- *Browser Developer Tools*

5. Evidence

Relevant screenshots and results. Real screenshots only.

6. Result

What did you achieve or discover?

I successfully learned how HTTP and HTTPS work, how browsers communicate with web servers, and how HTTP methods, status codes, headers, URLs, and cookies are used in web applications. I also practised GET, POST, PUT, and DELETE requests using the TryHackMe HTTP request emulator.

7. Key Learnings

What did you learn from the task?

- I learned how HTTP and HTTPS work and how browsers communicate with web servers.
- I learned about URLs, HTTP methods, status codes, request and response headers, and cookies.
- I understood the difference between GET, POST, PUT, and DELETE requests.
- I learned how HTTP status codes indicate successful requests, redirections, and errors.
- I understood how cookies help websites maintain user sessions.
- I gained practical experience sending HTTP requests using the TryHackMe emulator.
